Field by Field Permissions – Frontier Optional Feature

OVERVIEW

Field by field permissions is an optional feature used to restrict a user's ability to view certain fields in Frontier's Badge Setup and Pass Setup windows. Field by field permissions offers:

Assurance

Field by field permissions option offers assurance by keeping information private and by making sure the information in certain fields is not edited. Certain personal information on the Badge and Pass Setup windows may need to be kept confidential. For instance, an administrator may not want operators to view social security number, home address, or home phone number for badgeholders.

Ease of Use

Frontier's intuitive graphical user interface (GUI) makes setting up field by field permissions quick and easy. The colors of the fields change to represent the settings made to the fields.

Name	Relationship	Home Telephone	Work Telephone

Matrix Systems maintains a policy of continuous product improvement. Specifications are subject to change at any time.

Flexibility

The field by field permissions option can be configured to provide maximum flexibility. A user can view certain fields in the Badge Setup and Pass Setup windows based on the command group and/or domain settings for that user's user group.

Fields, headings, tabs, grids, and photo fields in the Badge and Pass Setup windows can be configured. The options for each field are:

- View – operators can view the information in a field but do not have permission to edit the information
- Edit – operators can view the information in a field and have permission to edit that information
- View Caption – operators cannot view or edit the information in a field but can see the caption heading of that field.

The screenshot shows the 'Frontier' application window. The main area is a form for user profile management. It includes fields for address, birth date, citizenship, gender, and physical characteristics. There is also a section for emergency contacts with a table structure. The interface is designed with a classic Windows-style toolbar and a 'Valid' status indicator on the right side.

REQUIREMENTS

Frontier

- Version 5.7.2.0 or greater
- Field by field permissions license
