Key Control – Frontier Optional Feature

OVERVIEW

Key Control is an optional feature providing the capability to monitor and control the tracking of mechanical keys at a facility. The Key Control feature offers:

Convenience

When the Key Control feature is enabled, operators can enter information about keys available including a description, serial number, manufacturer, and number of keys available. Keys can be assigned to Key Groups to help assign permissions for keys. Key Groups are then assigned to badgeholders in the Badge Setup Window. Operators can check keys out or in for badgeholders as well as configure an Overdue Key Alarm.

Ease of Use

Operators can easily check keys in or out for badgeholders from the Badge Setup window and monitor the Overdue Key alarms from the Operations window.

REQUIREMENTS

Frontier

- Version 2.0 or greater
- Key Control license

Matrix Systems maintains a policy of continuous product improvement. Specifications are subject to change at any time.
