

Our Frontier Access Control and Alarm Monitoring System offers a cutting edge integrated badge identification photoimaging system. Discover the many benefits of Frontier ImageWorks!

Frontier ImageWorks – Optional Feature

OVERVIEW

Frontier provides an optional, fully integrated Photoimaging system containing all of the necessities including: photoimaging workstation, photoimaging software, camera, camera stand, backdrop, printer, badges and ribbons. In addition, Frontier's Photoimaging system offers:

Efficiency

Frontier's Photoimaging system provides a single point of data entry, which saves time from entering badgeholder information multiple times and also reduces the chance for data entry errors. In addition, there are no manual steps for encoding, laminating and/or cutting of badges – images are captured and badges are encoded and printed directly from Frontier. The system also supports reprinting and batch printing capabilities.

Ease of Use

The Photoimaging system is easy to setup and use. Photoimages can be captured directly from Frontier and/or image files may be imported directly into Frontier. Photoimages may also be enhanced directly from Frontier to adjust for such things red eye and brightness. Also, the system prints to magnetic stripe, proximity or multiple technology cards – the cards are ready for use with the Frontier system upon printer output.

Flexibility

Badge Design software is included with the Photoimaging option allowing for flexibility in adding new badge designs to the system and/or changing existing badge designs as needed.

Quality

Badges printed are a high-quality, color photo identification badge.

REQUIREMENTS

Hardware

- Frontier Windows® 2000 or XP Workstation
- Photo ID capture system
- Photo ID printer including ribbons & badges

Frontier

- Version 5.5.0 or greater
- Photoimaging License
